1. About the Organization

Infosys is a global leader in next-generation digital services and consulting, navigating clients in more than 50 countries through their digital transformation journeys.

2. Key Roles & Responsibilities

- Develop high-complexity enterprise applications using modern microservices stacks.
- Work with modern full-stack technologies (Java/Spring Boot, Node.js, React, Angular).
- Integrate automated CI/CD pipelines, container orchestration, and cloud native architectures.
- Lead coding standard compliance and mentor associate engineers in agile sprints.

3. Technical Requirements & Qualifications

- Expert-level algorithmic coding capability in Java, Python, C++, or C#.
- Solid experience with Full-Stack Development and Database Design.
- Strong understanding of Cloud fundamentals, Containerization, and REST APIs.
- Demonstrated participation in competitive programming platforms (LeetCode, Codeforces).

4. Selection & Interview Process

- Step 1:** Round 1: HackWithInfy / InfyTQ Advanced Coding Hackathon
- Step 2:** Round 2: Deep Technical Interview (Advanced DSA, Dynamic Programming, Graphs)
- Step 3:** Round 3: System Architecture & Web Technologies Interview
- Step 4:** Round 4: HR & Fitment Discussion
