1. About the Organization

Zoho creates software to solve business problems. With 55+ products serving 100+ million users worldwide, we focus on privacy, independence, and craft-first engineering.

2. Key Roles & Responsibilities

- Perform Static and Dynamic Application Security Testing (SAST/DAST) across Zoho suite apps.
- Audit web applications against OWASP Top 10 vulnerabilities (SQLi, XSS, CSRF, SSRF).
- Conduct penetration testing and write custom security plugins for internal deployment engines.
- Conduct security code reviews alongside core backend engineering teams.

3. Technical Requirements & Qualifications

- Strong proficiency in Java, C, or Python with good understanding of web fundamentals.
- Deep comprehension of HTTP protocols, Cookie flags, OAuth2, and Browser Security Models.
- Hands-on experience with Burp Suite, OWASP ZAP, Postman, and vulnerability scanners.
- Bug bounty experience or active security research portfolio is highly preferred.

4. Selection & Interview Process

- Step 1:** Round 1: Written Technical & Programming Test (Pen and Paper / Offline Compiler)
- Step 2:** Round 2: Advanced Coding & Logic Round (Live Problem Solving on Zoho IDE)
- Step 3:** Round 3: Application Security & Vulnerability Assessment Deep-dive
- Step 4:** Round 4: General HR & Culture Alignment Interview
